Graded quiz on Tangent Lines to Functions, Exponents and Logarithms

CALIFICACIÓN DEL ÚLTIMO ENVÍO
84.61%

1. Convert $\frac{1}{49}$ to exponential form, using 7 as the factor. 1 / 1 puntos

- 49^{-1}
- (•) 7^{-2}
- $\frac{7}{7^3}$
- (7^2)

Correcto
The rule for a factor to a Negative exponent is to divide by the same factor to a positive exponent with the same absolute value.

2. A light-year (the distance light travels in a vacuum in one year) is $9,460$ trillion meters. Express in scientific notation. 0 / 1 puntos

- 9.46×10^{15} meters.
- 0.946×10^{16}
- (•) 9460×10^{12} meters
- 9.46×10^{15} kilometers

Incorrecto
$9,460$ is (9.4×10^3) meters and one trillion meters is 10^{12} meters. $(9.4 \times 10^3)(10^{12}) = 9.4 \times 10^{15}$. A kilometer is 1000 meters.

3. Simplify $(x^8)(y^3)(x^{-10})(y^{-2})$ 1 / 1 puntos

- $(x)(y^{-2})$
- (•) $(x^{-2})(y)$
- $(x^2)(y)$
- $(x^{-80})(y^{-6})$

Correcto
By the Division and Negative Powers Rule, this is $(x^{(8-10)})(y^{(3-2)})$

4. Simplify $[(x^4)(y^{-6})]^{-1}$ 1 / 1 puntos

- (•) $(x^{-4})(y^6)$
- $\frac{(x^-4)}{(y^6)}$
- $\frac{(x^4)}{(y^{-6})}$
- $(x^3)(y^{-7})$

Correcto
By the Power to a Power Rule, each of the exponents is multiplied by (-1)

5. Solve for x: 1 / 1 puntos

$\log_2(39x) - \log_2(x-5) = 4$

- $\frac{23}{80}$
- $\frac{80}{38}$
- $\frac{-80}{23}$
- $\frac{39}{23}$

Correcto

$\log_2 \frac{39x}{(x-5)} = 4$ by the Quotient Rule.

Since both sides are equal, we can use them as exponents in an equation.

$$2^{\log_2 \frac{39x}{(x-5)}} = 2^4$$

$$\frac{39x}{(x-5)} = 16$$

$$39x = 16 \times (x-5)$$

$$39x = 16x - 80$$

$$23x = -80$$

$$x = \frac{-80}{23}$$

6. Simplify this expression: **1 / 1 puntos**

$$(x^{\frac{1}{2}})^{\frac{-3}{2}}$$

- (●) $x^{\frac{-3}{4}}$
- ( ) $x^{\frac{4}{3}}$
- ( ) x^{-1}
- ( ) $x^{\frac{1}{3}}$

✓ **Correcto**

We use the Power to a Power Rule -- multiply exponents:

$$x^{\frac{1}{2}\times\frac{-3}{2}} = x^{\frac{-3}{4}}$$

7. Simplify $\log_{10} 1000 + \log_{10} \frac{1}{10000}$ **0 / 1 puntos**

- ( ) -1
- ( ) 1
- (●) $\log_{10} -10$
- ( ) $\frac{1}{10}$

! **Incorrecto**

By the Product Rule, this is:

$$\log_{10}(\frac{1000}{10000}) = \log_{10}(\frac{1}{10}) = ?$$

Review the problem and check your math!

8. If $\log_3 19 = 2.680$, what is $\log_9 19$? 1 / 1 puntos

- (●) 1.304
- ( ) 0.4347
- ( ) 5.216
- ( ) 0.8934

✓ Correcto

To convert from $\log_3$ to $\log_9$, divide by $\log_3 9$. Which is equal to 2, so the answer is 1.34

9. If $\log_{10} b = 1.8$ and $log_a b = 2.5752$, what is a? 1 / 1 puntos

- (●) 5
- ( ) 6
- ( ) 4
- ( ) 3

✓ Correcto

To solve for a in the formula;

$$\log_a b = \frac{\log_x b}{\log_x a}$$

$\log_a b = 2.5752$ and $\log_{10} b = 1.8$

Therefore, $\log_{10} a$ must equal to $\frac{1.8}{2.5752} = 0.69897$

Treating both sides of equation $\log_{10} a = 0.69897$ as exponents of 10 gives $a = 10^{0.69897} = 5$

10. An investment of $1,600$ is worth $7,400$ after 8.5 years. What is the continuously compounded rate of return of this investment? 1 / 1 puntos

- (•) 18.02%
- ( ) 20.01
- ( ) 19.01%
- ( ) 17.01%

✓ Correcto

$$\frac{\ln \frac{7400}{1600}}{8.5} = 0.18017$$

11. A pearl grows in an oyster at a continuously compounded rate of $.24$ per year. If a 25-year old pearl weighs 1 gram, what did it weigh when it began to form? 1 / 1 puntos

- (•) 0.002478
- ( ) 0.0002478
- ( ) 0.2478
- ( ) 0.02478

✓ Correcto

$$e^{(0.24\times 25)} = \frac{1}{x}$$

$$x = \frac{1}{(e^{0.24\times 25})}$$

$$x = \frac{1}{403.4288}$$

$$x = 0.002478$$

12. $\log_2 z = 6.754$. What is $\log_{10}(z)$? 1 / 1 puntos

- 0.49185
- 1.3508
- 0.82956
- 2.03316

Correcto

$$\frac{\log_2 z}{\log_2 10} =$$

$$(\log_{10} z) \times (\log_2 10) = 3.321928$$

Therefore, $\log_{10} z = \dfrac{6.754}{3.321928} = 2.03316$

13. Suppose that $g : \mathbb{R} \to \mathbb{R}$ is a function, and that $g(1) = 10$. Suppose that $g'(a)$ is negative for every single value of a.Which of the following could possibly be $g(1.5)$? 1 / 1 puntos

- $g(1.5) = 103.4$
- $g(1.5) = 10.1$
- $g(1.5) = 9.7$
- $g(1.5) = 11$

Correcto

Since the slope of the tangent line to the graph of g is negative everywhere on the graph, we know that g is *decreasing* function! And therefore we must have $g(1.5) < g(1)$. That is the case here, so this value is at least possible.
